

Transport

Transport emissions can be minimised in a number of easy and active ways.

What UQ is doing

- UQ promotes the annual Walk to Work Day and National Ride2Work Day.
- UQ's Bike Boxes include locker rentals and changing facilities.
- Bike racks, water refill stations, cycle repair stations and paths are available for cyclists and walkers.
- UQ campuses offer convenient bus stations and ferry terminals.
- UQ's Fleet include Zero Emissions Vehicles, which use energy from the solar grid.

Why this is important

- Fuel consumption emits greenhouse gases and other harmful gases, which affects Earth's climate and natural systems.
- Gas emissions also affect human health through poor air quality.
- Choosing sustainable transport lowers carbon emissions and can improve personal health.

What you can do

- Choose to walk, ride a bike, or hop on public transport.
- Carpool or rideshare to a common location.
- Choose teleconferencing or email instead of meeting face-to-face.
- Consolidate required travel by grouping like-locations on the same day and sharing a vehicle.
