# Warwick Solar Farm project

## Project snap shot – February to April 2019

UQ is committed to sustainability leadership, and will be the first university in the world to generate 100 per cent of its electricity from its own renewable energy asset.

The UQ Warwick Solar Farm will enable UQ to be 100% renewable by 2020. This means the solar farm will generate as much or more electricity each year than the University needs.

The project will provide the groundwork for a wide range of new teaching, research and engagement opportunities, in addition to its environmental and financial benefits.

Lendlease has been appointed to design and construct the 154 hectare solar farm which is located at Sladevale, about 5km north of the Warwick town centre.

Lendlease have been on site since mid-February 2019 with construction work beginning in April 2019. Completion is expected in early 2020.
